Abstract of the Paper:

The Artificial Intelligences is a golden era of the 21st century where all the people connect with their smart phones and these smart phones have the soft AI such as Appl's Suri and googles assistants, we are so much in peace and ease with these high tech. that we don't even realize what kind of future we are creating for our self's. We are always captivated by the AI work, which is now a days replacing some particular kinds of jobs or the right way to say it 'Stealing' our jobs. AI are becoming more Humanoid, they are learning cognitive behaviors, emotions human values etc. But what if they can actually learn the Importance of the Human Rights, Human Values? Can they?

The Meaning of Artificial Intelligences: Artificial intelligence (AI) is the simulation of human intelligence processes by machines, especially computer systems. These processes include learning (the acquisition of information and rules for using the information), reasoning (using rules to reach approximate or definite conclusions) and self-correction, this meaning gives them the fuller meaning. AI is getting more and more Data these Data is used to create more accurate Algorithms, the better these Algorithms AI services will be more and more helpful. In social work field where it's have core elements like the Human Rights, Values. Can AI provide such enabling to the needy? Is it possible for AI to have Intuition like Humans to perform a jobs like Social worker's do? This paper discuss these impacts of the AI on Individuals and on society, with the social work perspective.

Key Words: Artificial Intelligence, Social Work, Impact of AI on Individuals and society, special groups or vulnerable groups, assistants of AI.
